ALDO MARCELINO

FULL-STACK SOFTWARE ENGINEER

+62 822-6758-0929 | aldomarcelinolubis@gmail.com | LinkedIn | GitHub | Jakarta, Indonesia

SUMMARY

Full-stack software engineer building web applications across frontend and backend, from SaaS platforms and business applications to products built with small teams. Experienced in Next.js, TypeScript, and NestJS, with a focus on clear interfaces, reliable services, and maintainable code. Collaborates remotely with Singapore-based teams and delivers features across production products.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, Vue, Nuxt, Tailwind CSS, React Native / Expo

Backend: Node.js, NestJS, Go, REST APIs, GraphQL

Databases: PostgreSQL, MongoDB, MySQL, Redis, Firebase

Cloud & delivery: AWS, Google Cloud Platform (GCP), BytePlus, Vercel, Docker, Git

State & quality: Redux Toolkit, Redux Saga, Zustand, Jotai, TanStack Query, SWR, unit testing, Lighthouse, PageSpeed Insights

PROFESSIONAL EXPERIENCE

Full-Stack Engineer | Full-time

L'tria Tribe Benefits | Singapore | Remote — Jan 2025 - Present

- Build and maintain Tribe Benefits and NOVA by Tribe, two employee benefits products for employers and their teams in Singapore.
- Develop Nexus HR Admin, a B2B portal for client HR teams, alongside interfaces and backend services for benefits, wellness, and rewards.
- Integrate payment gateways, Amazon S3 storage, and Postmark transactional email; manage deployments on Vercel.
- Maintain unit test coverage above 93% across both products and guide performance, accessibility, and SEO improvements with Lighthouse and PageSpeed Insights.

Technologies: Next.js, TypeScript, NestJS, MongoDB, PostgreSQL, Amazon S3, Vercel, Postmark

Front-End Engineer | Contract

CIMB Niaga | Jakarta, Indonesia — Dec 2023 - Dec 2024

- Developed frontend experiences across three banking products: the public API portal, Back Office, and Customer Portal.
- Built reusable interface components and managed application state, API data fetching, and caching across banking service workflows.
- Improved public-portal performance and SEO with PageSpeed Insights; reviewed accessibility with Lighthouse and maintained high unit test coverage.

Technologies: Next.js, Jotai, Zustand, TanStack Query, SWR, MUI Material, shadcn/ui

PROFESSIONAL EXPERIENCE / CONTINUED

Front-End Engineer | Full-time

Eranyacloud | Jakarta, Indonesia — Jan 2023 - Nov 2023

- Developed frontend applications for two products at an Indonesian cloud services provider, including the customer-facing Compute Console.
- Connected interfaces to cloud service APIs and coordinated application state and asynchronous workflows with Redux Toolkit and Redux Saga.
- Maintained comprehensive unit test coverage and reviewed responsive behavior, accessibility, performance, and SEO with Lighthouse and PageSpeed Insights.

Technologies: Next.js, Nuxt, Redux Toolkit, Redux Saga

Full-Stack Engineer | Part-time

Ekuid | Jakarta, Indonesia — Dec 2022 - Jun 2026

- Developed web applications and backend services for EKUID, a securities crowdfunding platform, and Wukong, an event ticketing platform.
- Built Back Office tools for managing crowdfunding projects and events, with dashboards for monitoring revenue and activity.
- Integrated Xendit and Nicepay payment gateways and worked with AWS services to support application infrastructure and delivery.

Technologies: Next.js, NestJS, GraphQL, Go, PostgreSQL, Xendit, Nicepay, AWS

SELECTED PROJECTS

Cadira | Exam preparation SaaS | Team of 3

Built and launched a subscription-based preparation product with practice tests, timed exam simulations, and progress tracking. Reached **11 paying users in the first month**.

Technologies: React, Vite, Firebase, Midtrans

Reign Models | Client project | Team of 2

Delivered a model discovery and booking inquiry platform for a Bali-based agency, featuring a roster of **25+ models**. Connected a Next.js frontend with a NestJS backend.

Technologies: Next.js, NestJS

Rumah Bisnis Mandiri | Campus-led community project | Archived

Built product discovery, seller information, and catalogue management tools for a local small-business support initiative. Previously used by the community; the service is now closed.

Savvie | Food rescue mobile app | Prototype

Built with friends to connect sellers of surplus food with people looking for discounted meals. A working local prototype and recorded product walkthrough are available.

Technologies: React, Expo, Node.js, Redux, Xendit API

EDUCATION

Bachelor of Informatics Engineering

Universitas Dian Nuswantoro | Graduated Aug 2023 | Cumulative GPA: **3.54/4.00**

Full Stack JavaScript Program

Hacktiv8 | Completed Nov 2022 | Grade: 94.3/100
